Accompanying exhibition

12 and 13 November 2013
Wiesbaden, Rhein-Main-Hallen

Cybercrime

threat - intervention - defence

The efficient combat against cybercrime and its related offences the latter taking advantage of the modern information- and communication facilities is at the time being one of the important challenges for security authorities worldwide.

The subject of cybercrime will be scrutinized as a phenomenon as well as in the view of policing in general during this year's BKA's autumn conference.

The aim is to outline furthermore forms of urgent actions with regard to an efficient and future-oriented structure dealing with security.

An exhibition going along with this year's autumn conference will present studies and procedures of national and international sources to combat cybercrime and its side-effects.

*Fraunhofer Institute for
Telecommunications
Heinrich-Hertz Institute*

Hasso Plattner Institute

The Universität der Bundeswehr München

Technologies and Research

It is within this exhibition that one has the opportunity to be updated about new products and their potential consequences for policing, products partly not yet available on the market. Furthermore, possible new fields to be endangered by cyber-attacks will be introduced. New “centres of research”, coping with technical challenges of the so-called “always-on-society”, will display drafts, strategies and technical proposals for an efficient “cyberdefence”.

*The Fraunhofer Research Institution for
Organics, Materials and Electronic Devices*

Federal Association for Information Technology, Telecommunications and New Media. Industry 4.0

Baden-Württemberg
LANDESKRIMINALAMT

*Security Cooperation Cybercrime
(North Rhine-Westphalia Land Criminal Police
Office, BITKOM,
Baden-Württemberg Land Criminal Police)*

**Bundesamt
für Sicherheit in der
Informationstechnik**

Federal Office for Information Security

Alliances

State authorities like police and jurisdiction alone cannot keep pace with the technical development, the spreading of new technologies and their application for criminal purposes. It is therefore indispensable to pursue alliances between different subjects, to establish cooperations within the economy, research institutions and authorities of security and prosecution on a national as well as an international level.

The autumn conference will face and deal with this problem in the frame of this exhibition. Current cyber alliances will take this opportunity to present achievements and to advertise for further initiatives to be intensified.

*Federal Office for the Protection of the
Constitution*

**Bundesamt für
Verfassungsschutz**

*German Aerospace Center
Center for Satellite Based Crisis Information*

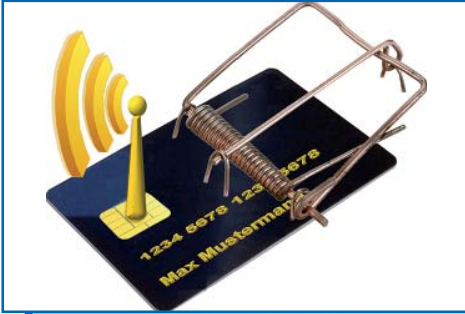

**Deutsches Zentrum
für Luft- und Raumfahrt**

Europol - European Cybercrime Centre

EC³
EUROPOL

*Forensic analysis in the field of
ICT forensics*

Forensic analysis of data carriers

Cybercrime Investigations

German Federal Criminal Police Office

The BKA - The German Federal Criminal Police Office - has been related in its legal and judicial tasks in many aspects to the conference's topic. This exhibition reveals single cases and deals with a wide frame of options. Foundings of phenomenological nature of various delinquencies, current misuses, selected BKA cases of investigations, as well as methods of policing up to the options of forensics coping with internet and communication. On location-demonstrations of selected issues will accomplish these presentations.

*Inter-agency center for the monitoring of In-
ternet pages and forums of relevance related to
religiously motivated extremism and terrorism*

*German Federal Criminal Police Office
Project Group "Call Centre Fraud"*

*German Federal Criminal Police Office
Literature Documentation*

*German Federal Criminal Police Office
Library*

Prevention / Information

Presentations and insights into institutions are displayed to the visitor. These items are to be seen in a wider connection with the topic of the conference and they are relevant for policing duties and task and are generally significant for a society's counter action versus offences and its consequences. The subject of crime prevention will be laid out by colleagues of the German Forum for Crime Prevention (DFK). The BKA will present during this conference extracts of a project in Turkey, named "Call Center Fraud". The "Weisser Ring e.V." (an organisation to support victims of crime), conveys an insight into victims' protection and victims' support in all fields of delinquency. Two service points are introduced here as well: our library and a center called literary documentation. Literary documentation has exploited and evaluated the most significant police-relevant magazines and book series of German language for almost 40 years.
